

The MCP Trilogy: Automating the AI Workflow

A CampusX Case Study on Building an Autonomous Newsletter Agent

The Velocity of AI Innovation Makes Manual Curation Impossible

The Problem

The Bottleneck

- Topics become obsolete within months.
- Tracking Arxiv, GitHub, and Twitter is a full-time job.
- Manual research time = 0 hours available.

The Goal

The Objective

Create the **high-quality "CampusX AI Newsletter"** without the manual grind.

Inspiration: "The Neuron" Newsletter—curated value without the noise.

MCP Acts as the Connective Tissue Between Intelligence and Data

Defining the Anatomy of the Perfect AI Newsletter

The Sections

1. Introduction
2. Big Story of the Week
3. Quick Updates (Rapid Fire)
4. Top Research Papers (via Arxiv)
5. Trending GitHub Repos
6. 5-Minute Tutorial (Learning Corner)
7. Top AI Products (via Product Hunt)
8. Viral Tweets
9. Closing Notes

A Three-Stage Autonomous Pipeline

The entire heavy lifting is delegated to Claude via three specific prompts.

Phase 1: Grounding the Agent in Internal Context

Before searching the web, the agent reads the company's mind.

Phase 1: Parallel Intelligence Gathering

Phase 2: Synthesizing Raw Data into a Cohesive Narrative in Obsidian

The prompt instructs Claude to act as an **"Assembly Agent,"** ensuring smooth transitions and a **unified voice.**

Phase 3: From Markdown to Production-Ready HTML

Code Transformation

INPUT

The Designer Agent

OUTPUT

Requirements:

- Responsive Design (Gmail compatible)
- CSS Styling
- Plain Text Fallback

Maximum Power, Minimal Code

No complex API wrappers. No Python scripts. Just JSON.

~~Complex
Python/API
Wrappers~~ ❌

```
{ } claude_desktop_config.json ×
{ } claude_desktop_config.json > { } claude_desktop_config.json
1 {
2   "github": {
3     "command": "npx",
4     "args": ["-y", "@modelcontextprotocol/server-github"]
5   }
6 }
```

Simple
Configuration ✅

You define the connection via config; the MCP server handles the complexity.

Mission Accomplished: A Finished Product in Minutes
